MORE TRACTION

MORE POUNDS PULL AND PUSH

BIGGER LOADER BUCKET

WITH THE 1600 4-WD

Figure 1

Figure 2

The addition of the four-wheel drive assembly to the already popular 1600 carrier makes it an outstanding loader in the 1-1/8 cubic yard class. See Figure 1. Approximately 30 percent more pounds pull is now available from this unit, therefore a larger loader bucket, 84 inches wide with a capacity of 1-1/8 cubic yards (SAE rated) is standard equipment (only with four-wheel drive). **THIS IS THE ONLY CHANGE IN THE 1600 LOADER WHEN MOUNTED ON THIS UNIT.**

Page 2

The front tires are 8.25 x 20 10 ply grader type, providing the extra traction needed to develop a total of approximately 11,000 pounds drawbar pull for excellent loader work. The extra 1,200 pounds of the four-wheel drive assembly added to the front end assures the traction necessary to make possible this extra pull and push power. Using the four-wheel drive unit makes the 1600 tractor-loader an excellent choice for stockpile work and general all-around dirt jobs.

The four-wheel drive will also add to the potential of the 1600 loader-carrier-hoe. See Figure 2. The additional traction will take this unit into and out of the difficult working areas where footing is soft or particularly rugged. Backfilling trenches and loading overfill is now easier than ever.

The front axle tread of the 1600 with four-wheel drive has been increased to 65 inches which makes the overall width at the front tires approximately 76 inches. The front wheels are pressed steel mounted to the planetary axle. The total weight of the tractor-loader is increased to 9,475 pounds, gas and 9,575 pounds, diesel; the 1600 loader-carrier-hoe to 12,780 pounds, gas and 12,880 pounds, diesel.

MORE MONEY INVESTED = MORE WORK COMPLETED

(WITH THE FOUR-WHEEL DRIVE 1600)

RESULT?

1. MORE JOBS OFFERED
2. JOBS COMPLETED QUICKER
3. AVAILABLE FOR MORE AND BIGGER JOBS
4. MORE MONEY EARNED
