**AIR PRECLEANER SCREENER FOR  
SUPER 55, 77 AND 88 TRACTORS**

Effective approximately October 1, 1957, Air Intake Precleaner Screener Field Installation Packages will be available for Fleetline 77 Diesel, Fleetline 88 HC and Diesel, Super 77 and 88 HC and Diesel, and Super 55 Diesel tractors. These precleaner screener packages are made available to meet field demand where adverse dust and plant fiber lint conditions exist.

The 77 and 88 HC and Diesel package consists of the precleaner screener, clamp and pipe extension and is mounted through the radiator shell. The Super 55 Diesel package consists of the precleaner screener, air cleaner, and grommet. The new air cleaner is required on the Super 55 because this is a straight through mounting and the air cleaner must support the whole unit. The present air cleaners are not heavy enough for this application.

Code number T-64 is for 77 and 88 package and code number T-63 is for the super 55 Diesel package. There is no package available for Fleetline 77 HC and Super 55 HC tractors.

Complete service and installation instructions are included in each package.
