SUPER 55 NEW SWINGING DRAWBAR

Effective with Super 55 tractor serial number 52 814-519 a new swinging drawbar has been released. This drawbar assembly is not interchangeable with previous Super 55 tractors due to the method of attachment to the rear frame.

Beginning with tractor serial number 52 814-519, two bosses were added to the bottom of the rear frame (see illustration) so that certain Ford and Ferguson equipment could be used with the Super 55. With the introduction of these bosses, it became evident we had a logical place to attach our swinging drawbar.

As of now, we have two Swinging Drawbar Packages:

- 25-P-52 Package for all Super 55 tractors with serial number 6 001-518 through 52 813-519.
- 25-P-66 Package for all Super 55 tractors from serial number 52 814-519 and up.

"PRODUCT KNOWLEDGE FIRST - SALES NEXT"

Page 2

The original swinging drawbar was attached to the tractor by a support bracket at each rear axle carrier using 1/2-inch diameter cap screws. The new swinging drawbar attaches to a single support bracket which is mounted on the new bosses by 5/8-inch diameter cap screws.

This new drawbar assembly mounting with the heavier cap screws should also help eliminate the cases where the 1/2-inch cap screws were being sheared off.
